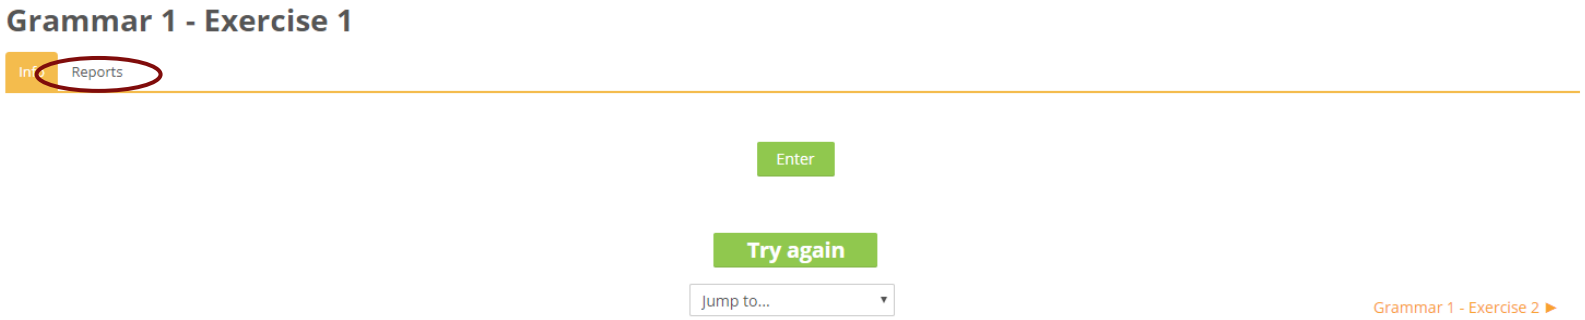
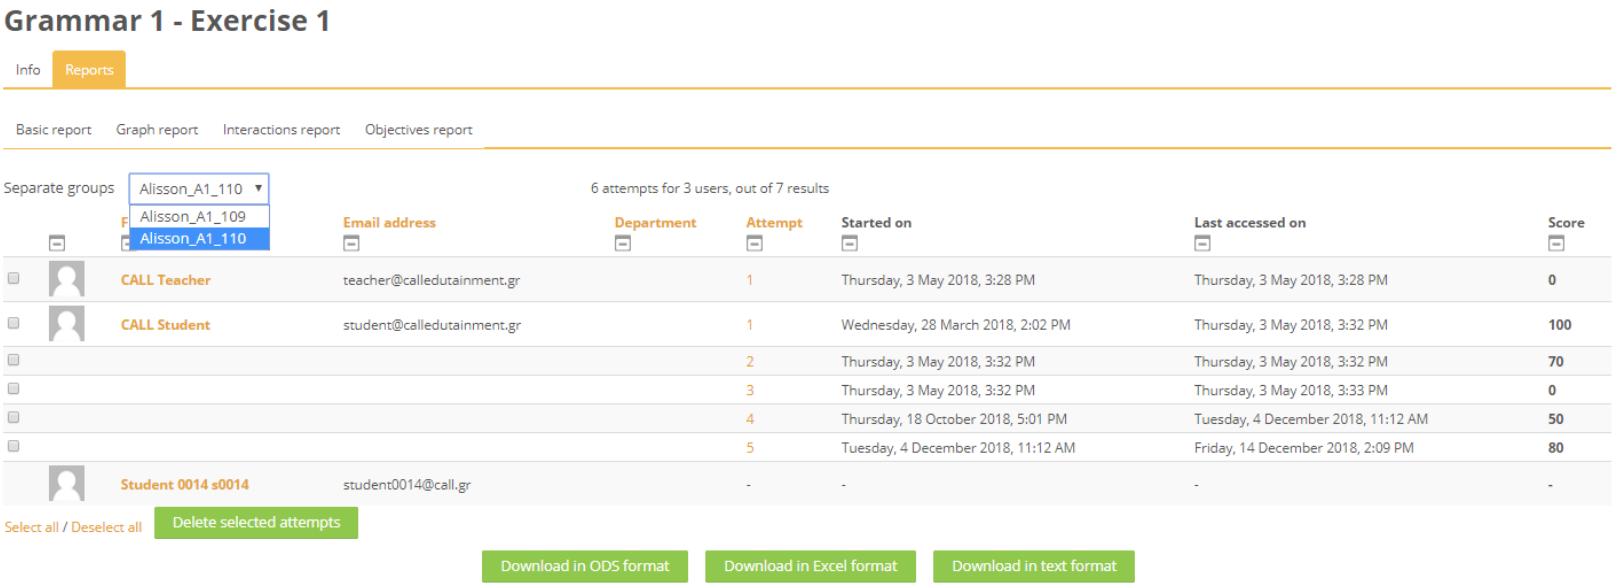
ACTIVITY REPORT

Teachers can evaluate their students' progress in an activity. Each time a teacher clicks on an exercise, there will be a top bar to access the activity report.

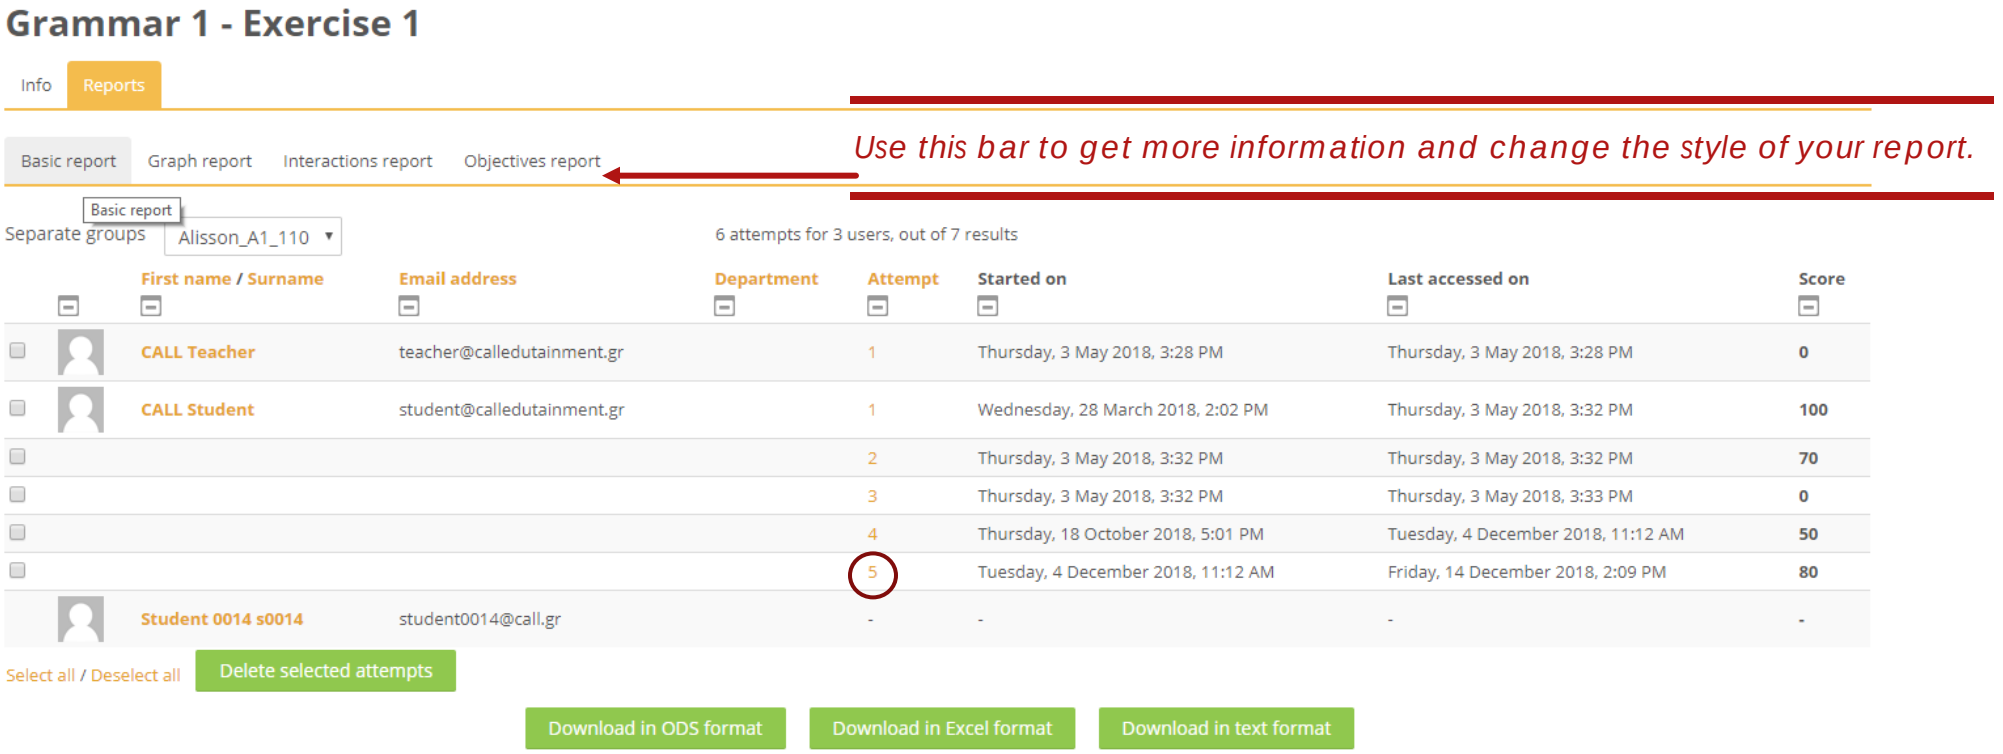


In the activity report, teachers can see a list of their students in groups. If a teacher has created more than one group, he can use the drop down list to change the group.

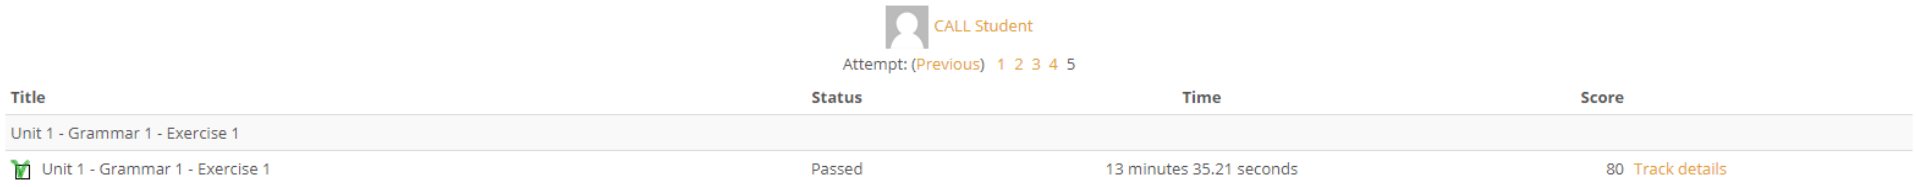


In Basic report view, teachers can see the number of attempts, the day they started and last accessed the activity and their score for each attempt.

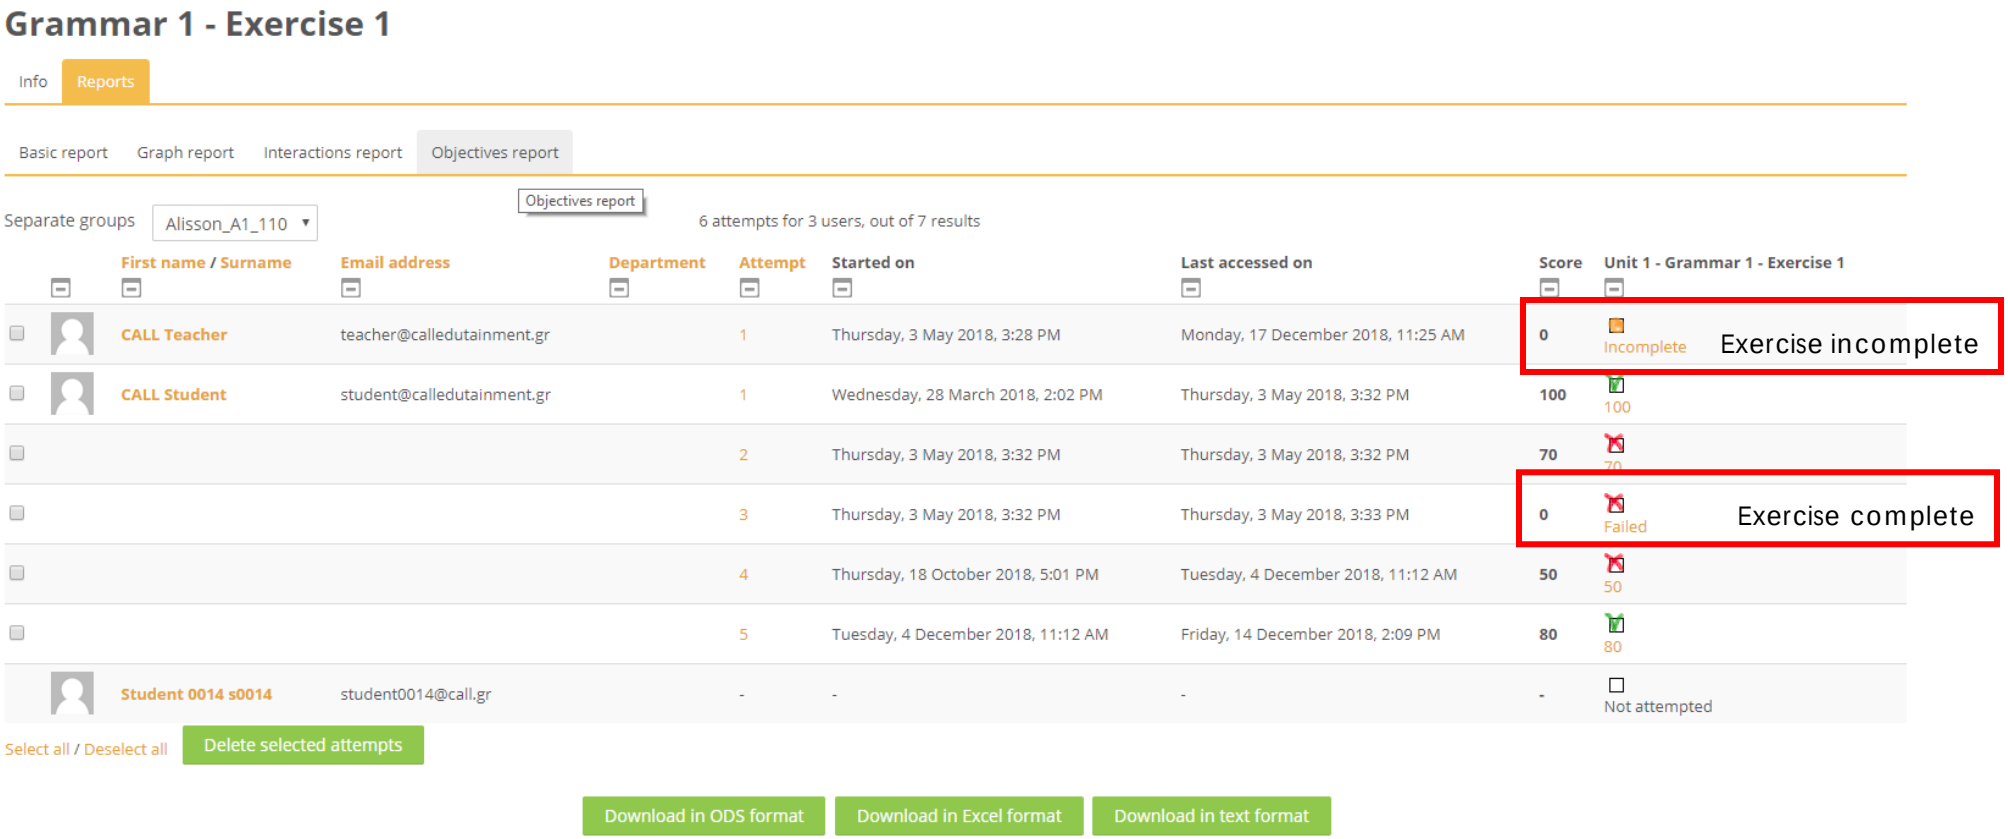
Inside Activity Report you will find a bar menu with different type or reports. By default the "Basic Report" is selected.



If you click on the number of the attempt, you can get a closer look at completion time and the activity status.



If a student hasn't completed an exercise, his score will be zero. You can preview the status for each attempt in the "Objectives report".



To complete an activity, you need to click on the "show score" button to a result. Otherwise your attempt will be marked as incomplete.

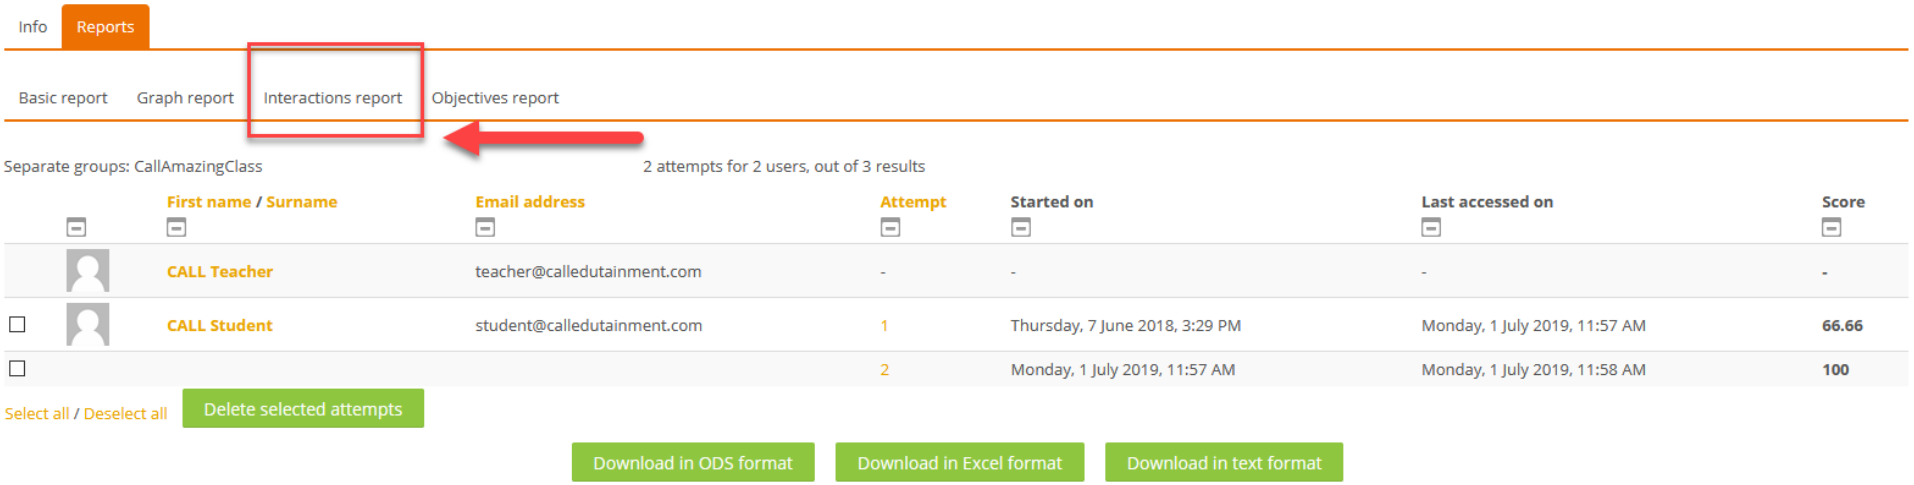
If you want to delete your student's attempts, you can select the check boxes of the attempts you want to eliminate and click "Delete selected attempts".

INTERACTIONS REPORT

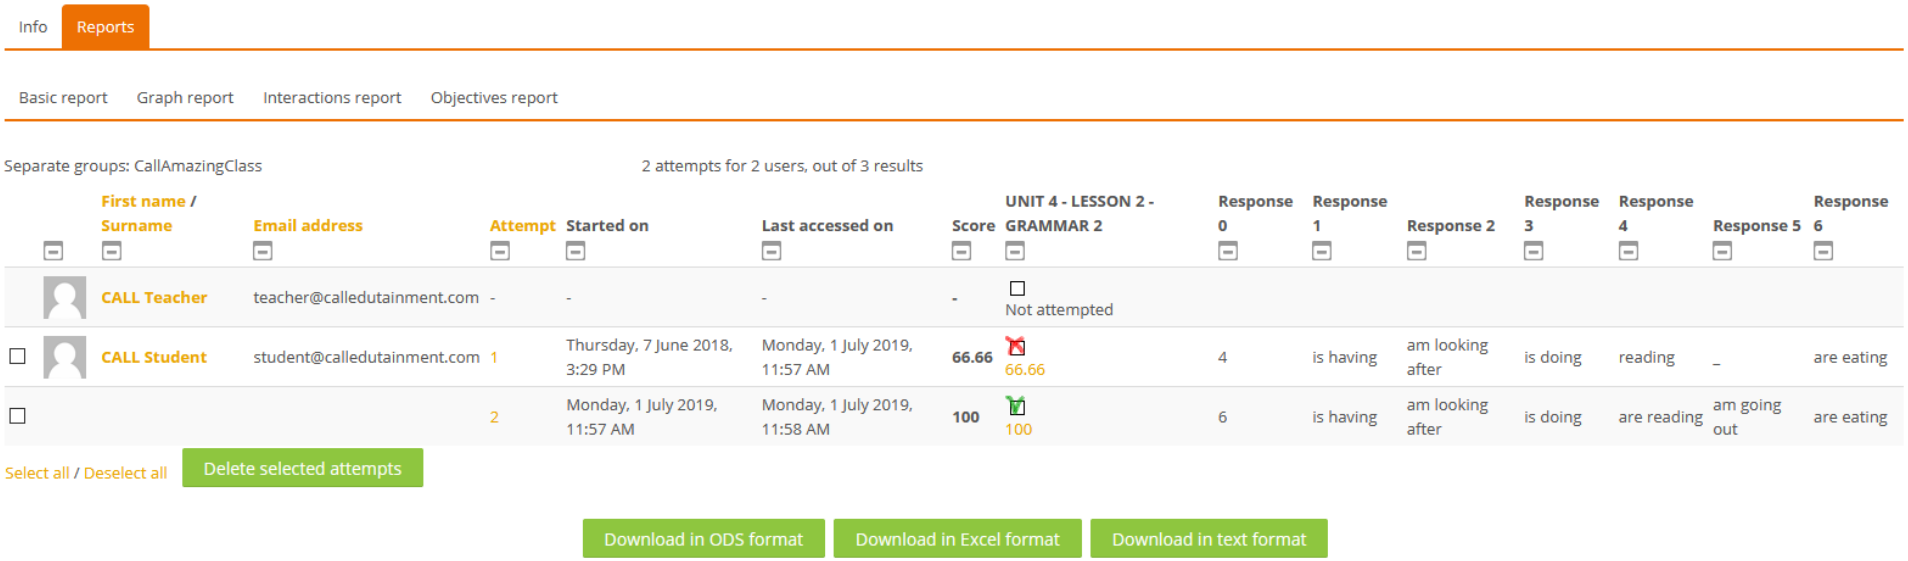
When students complete an activity in which they are required to type a word, phrase or sentence the **Interactions report** is activated. In this report **Teachers can view students' answers** for this type of activity. You can access the **Interactions report** through the Activity Report. There are two different versions of the **Interactions report,** the Short Version and the Complete Version

- **Short Version**

The short version only displays students' responses and can be accessed from the menu bar by clicking the **Interactions Report** button.



Then the report view will expand to include extra columns – one for each response.



In the example above you can see six response columns which means that this activity consists of six questions and answers.

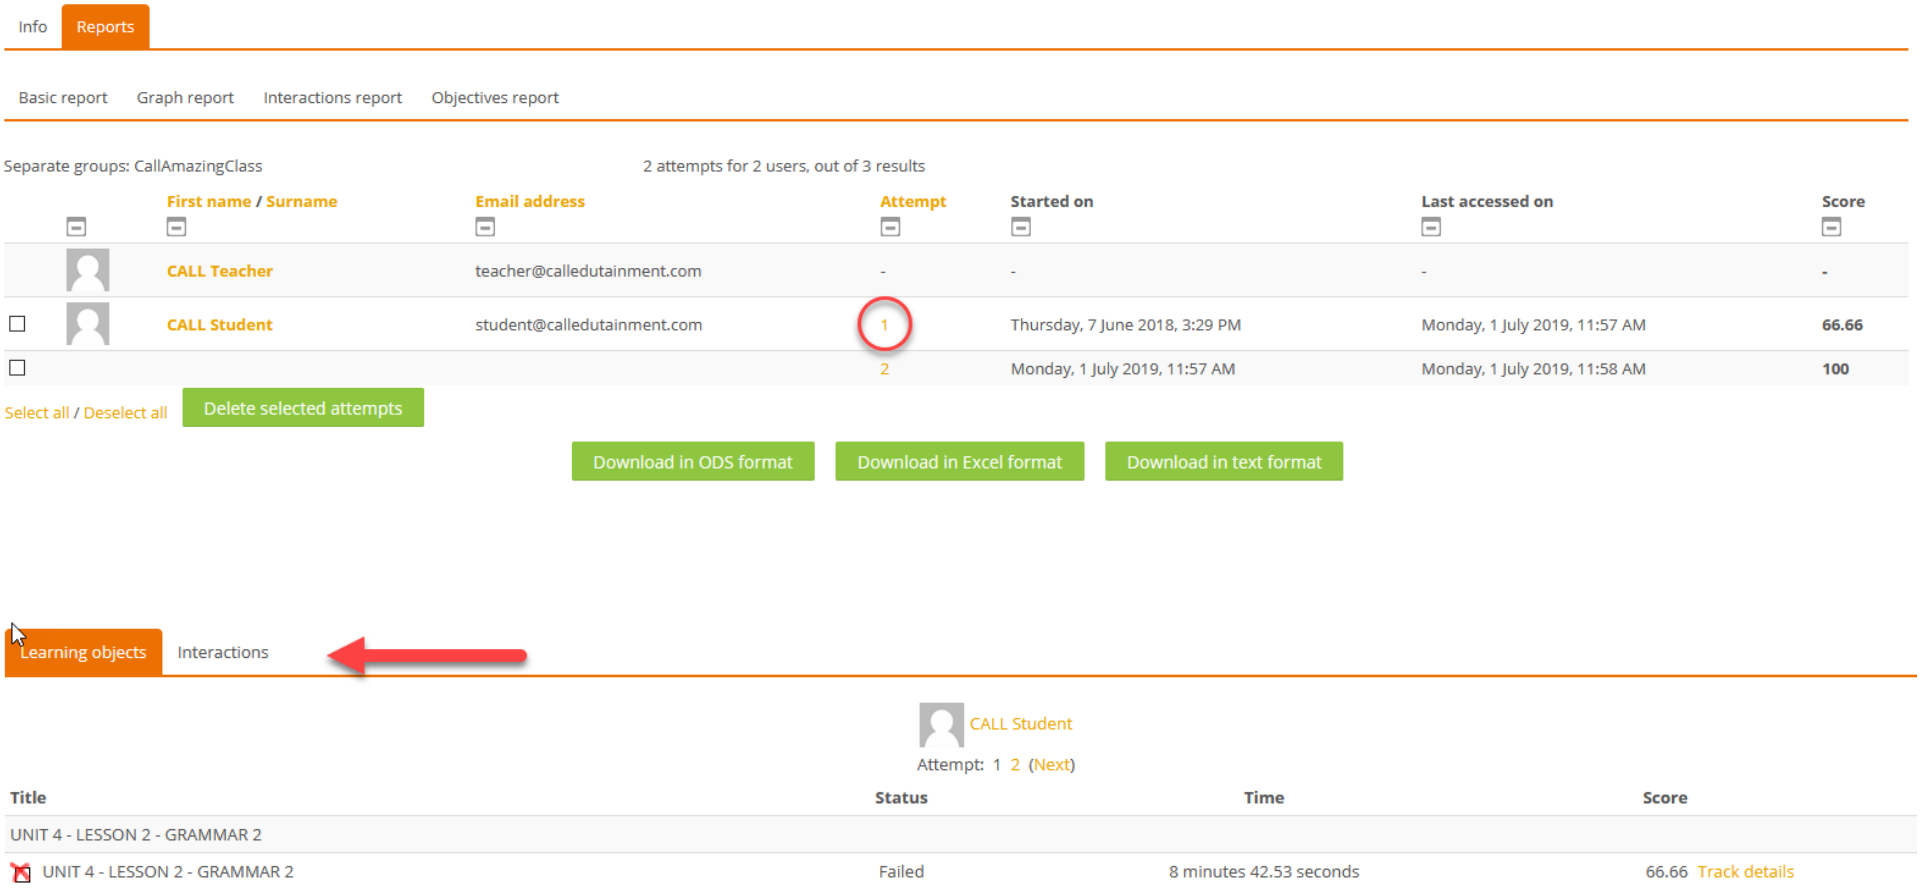
Response 0: Displays the number of correct answers.

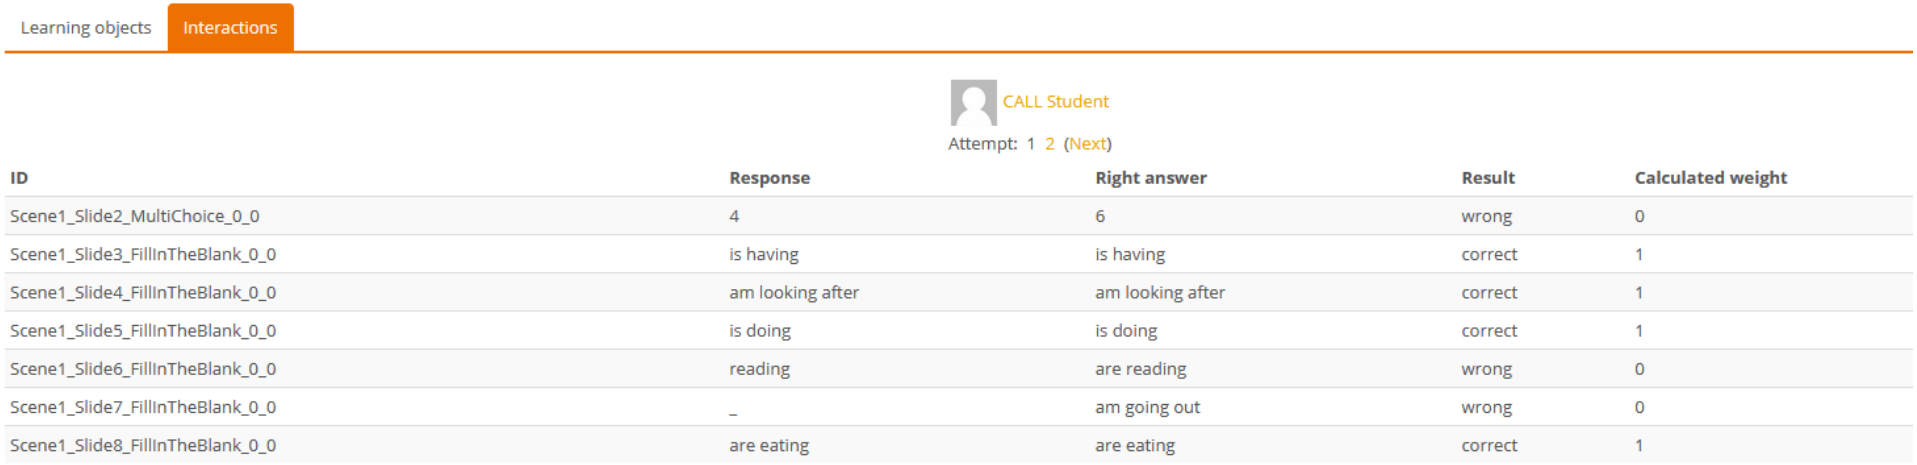
If students do not submit an answer then the report shows an underscore "_".

In the short version of the Interactions report you can see all your students' responses in the same list. Whereas, the complete version provides a detailed report for every one of the students' attempts.

- **Complete Version**

To view a Complete Interactions Report click on an attempt and select **Interactions** from the Top Bar.





ID	Response	Right answer	Result	Calculated weight
Scene1_Slide2_MultiChoice_0_0	4	6	wrong	0
Scene1_Slide3_FillInTheBlank_0_0	is having	is having	correct	1
Scene1_Slide4_FillInTheBlank_0_0	am looking after	am looking after	correct	1
Scene1_Slide5_FillInTheBlank_0_0	is doing	is doing	correct	1
Scene1_Slide6_FillInTheBlank_0_0	reading	are reading	wrong	0
Scene1_Slide7_FillInTheBlank_0_0	_	am going out	wrong	0
Scene1_Slide8_FillInTheBlank_0_0	are eating	are eating	correct	1

Under **Response** the teacher can view the student's response(s). The first row displays the total number of correct answers given.

Under **Right answer** the teacher can see the correct answer(s). If the system accepts more than one correct answer, then, all possible answers will be displayed.

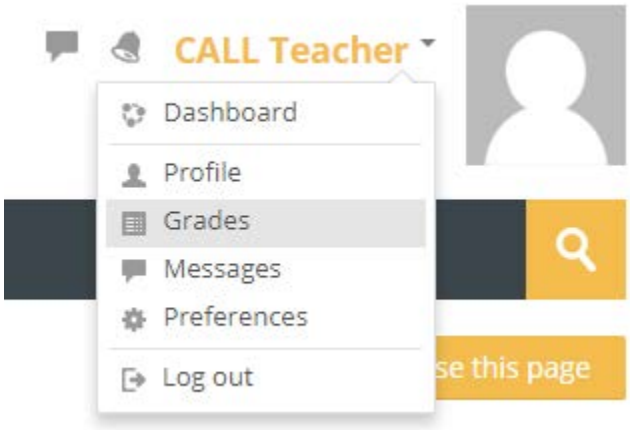
Under **Result** teachers can see if the answer provided is correct or wrong.

Calculated weight adds one point for each correct answer.

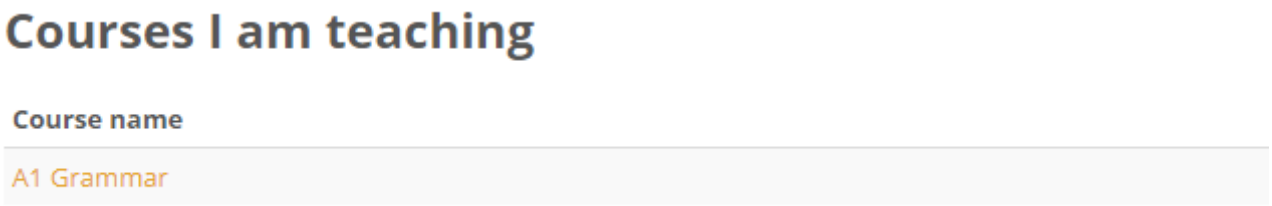
ID The systems provides a name for the type of the report. This column is autocompleted and is irrelevant with the student's response(s).

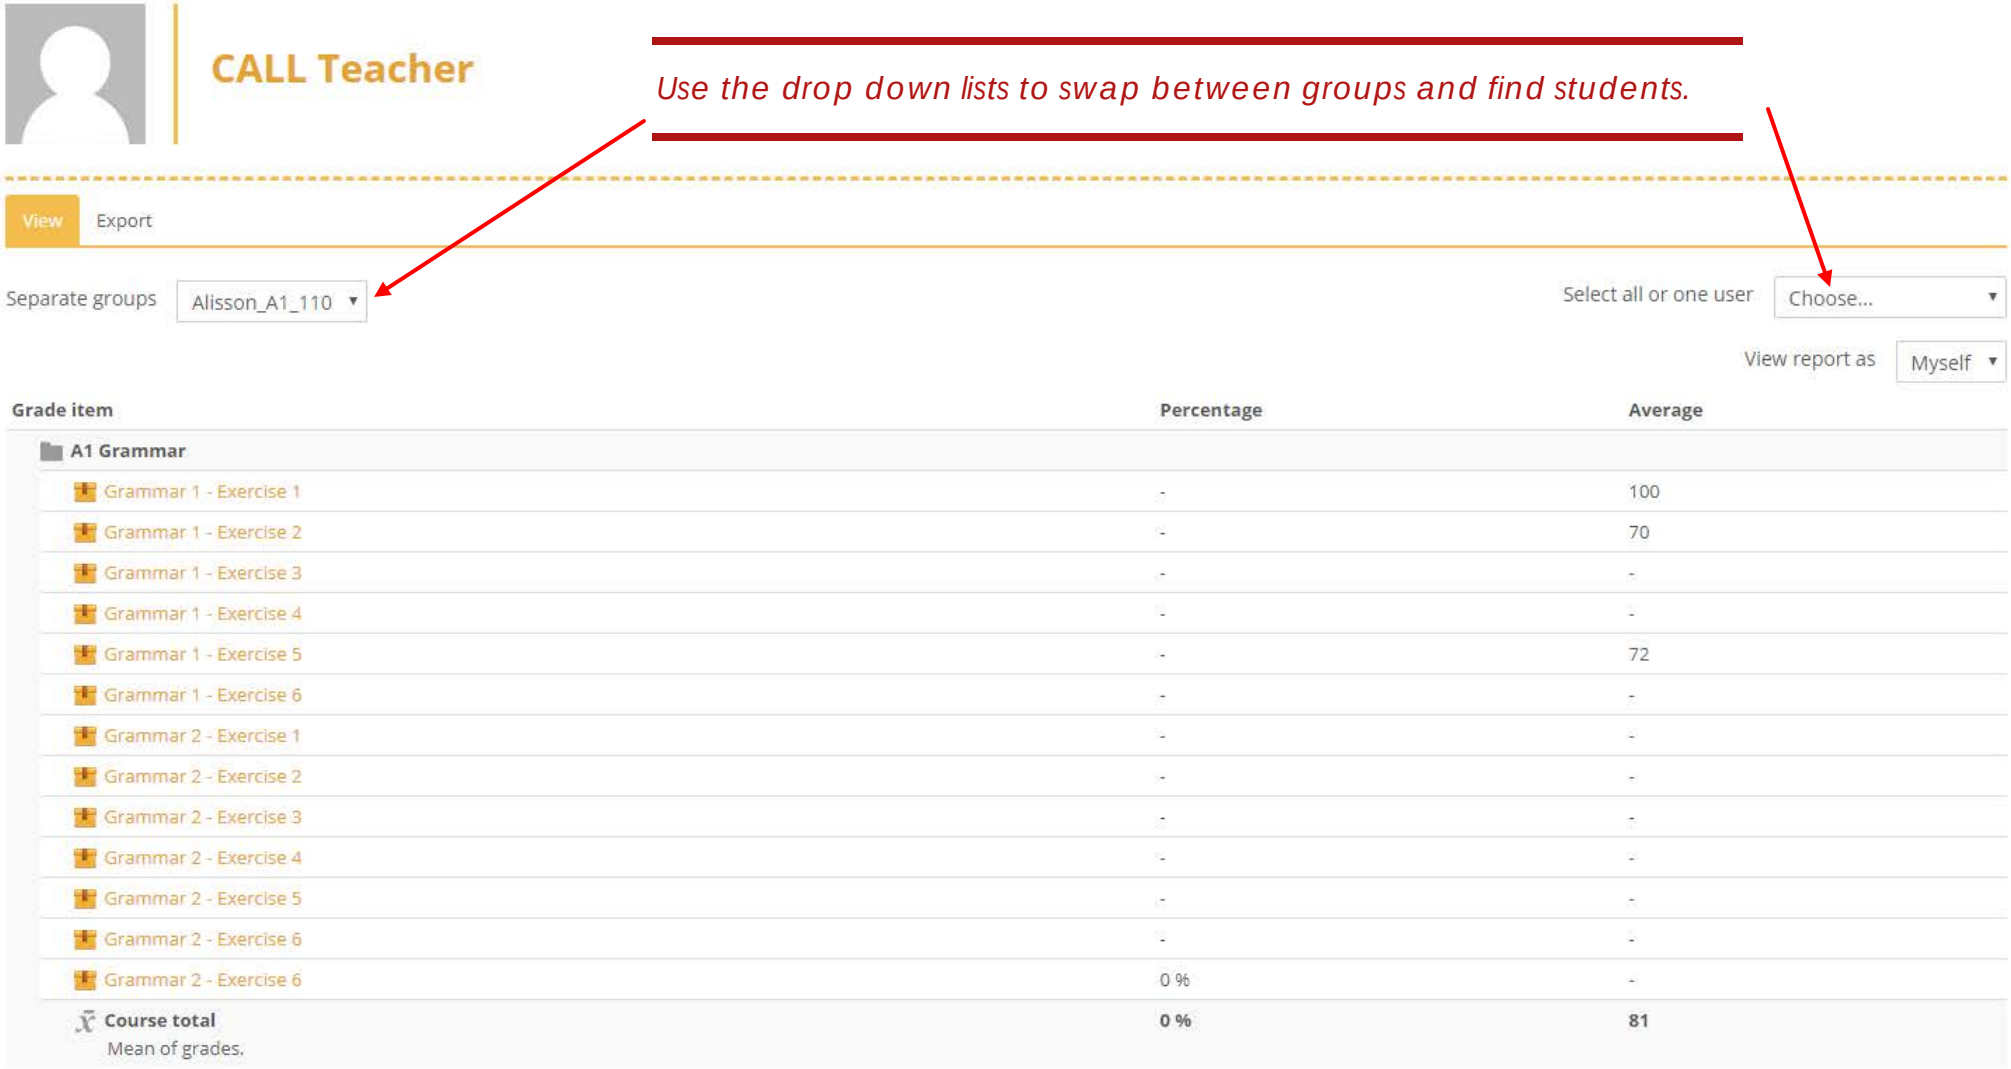
USER REPORT

There are multiple ways to access the User report. You can find “Grades” if you click on the name of your profile in the Dashboard page or you can visit your profile and click on “Grades overview”.



Next, you should choose the course that you want to get the report on.





In the “User report”, you can view only the **highest score** of a student in this activity. However, students can access the activity multiple times. If you want to see all the user’s attempts, you can click on a specific activity to get the activity report. (read Activity report)

Under the percentage column, you can view the score of the student for this activity. There won't be any score if students haven't accessed the activity at all. The average column displays the average score for this activity from all the users in this course not only your group's students.

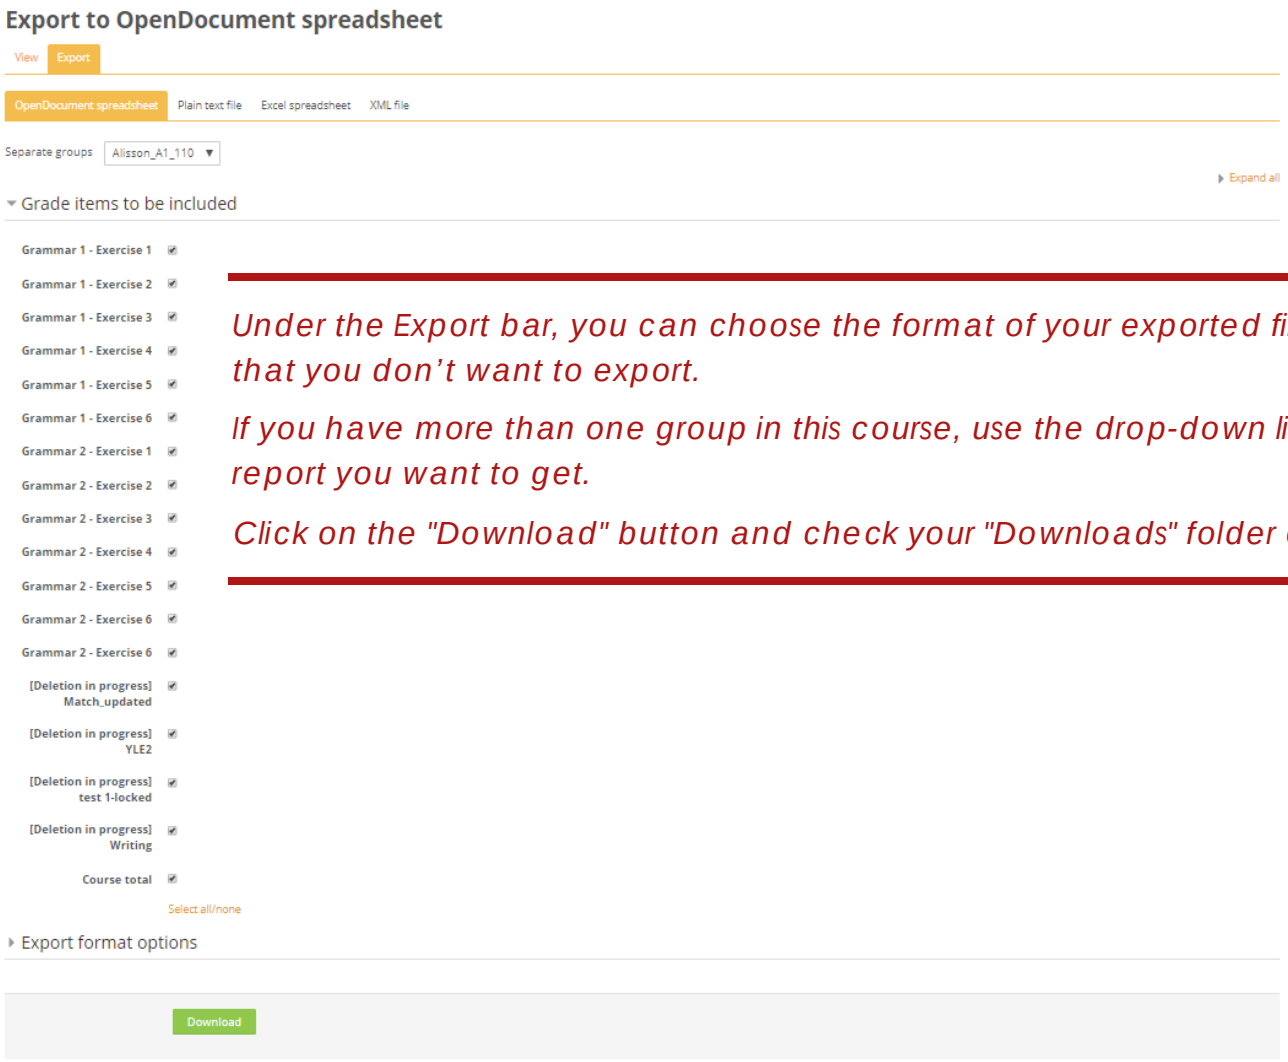
EXPORT REPORTS

You can export grade reports either for each course or for each activity.

- **Course report**

  Go to your User report page (User Report). Click “export” from the top bar.



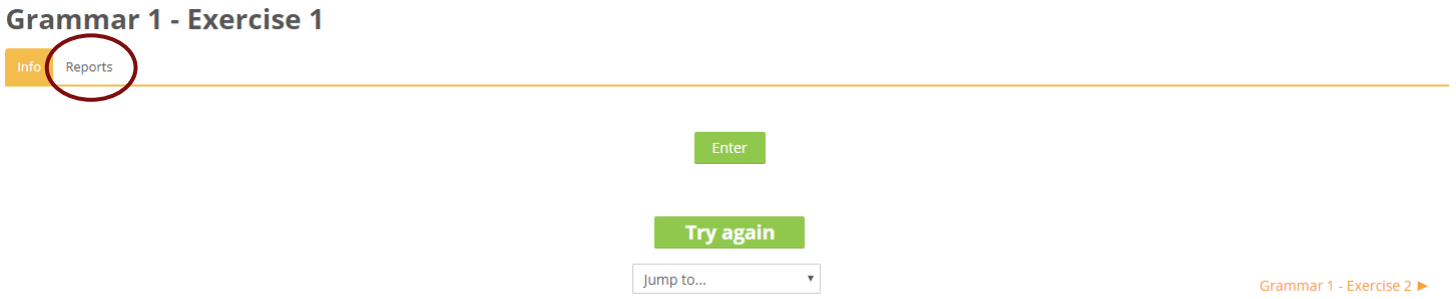
Under the Export bar, you can choose the format of your exported file. You can uncheck the activities that you don’t want to export.

If you have more than one group in this course, use the drop-down list to choose the group whose report you want to get.

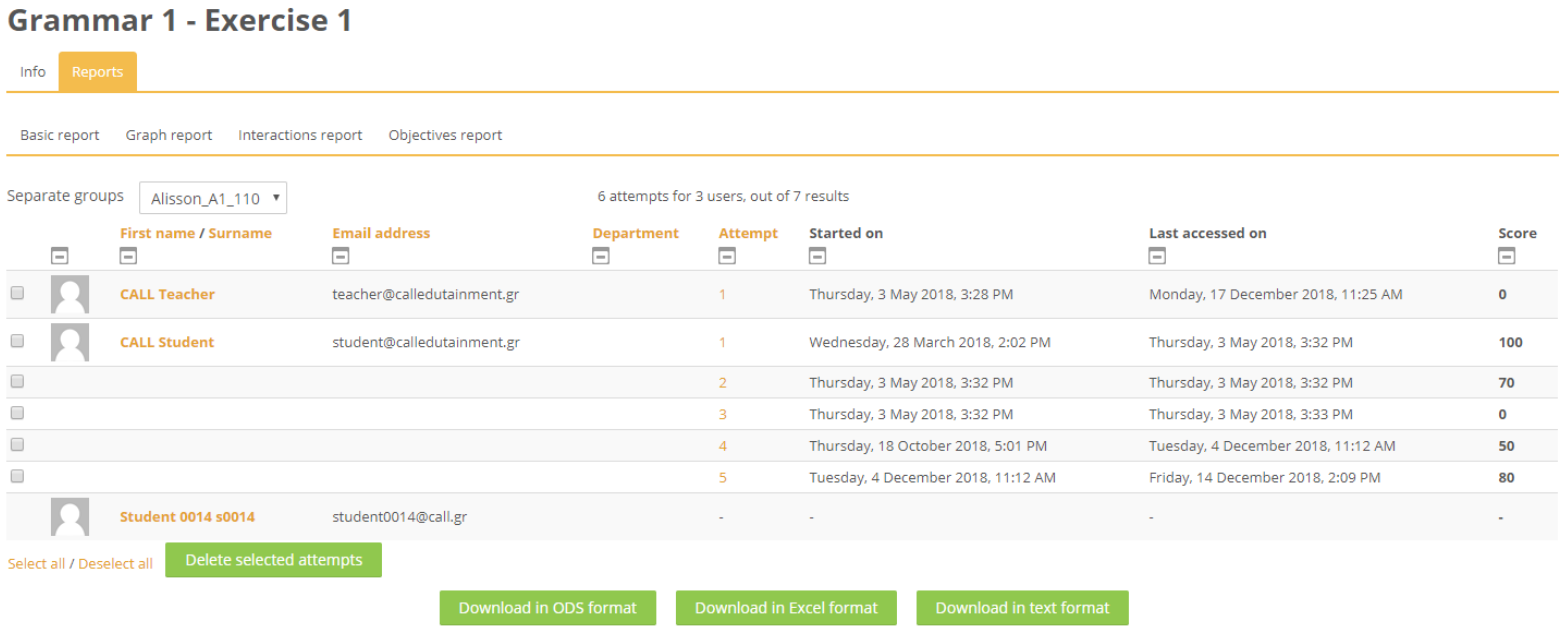
Click on the "Download" button and check your "Downloads" folder on your PC/laptop.

- **Activity report**

The easiest way to get an activity report is to open the activity. Before you enter the exercise, you will see a top bar with two options.



Click on “Reports” and you will be redirected to an activity report.



Use the green buttons to download the report in the format you prefer.
